POLISH RAILWAYS IN 2013 – MARKET OPERATION AND TRAFFIC SAFETY

The annual report "Polish railways in 2013 – market operation and traffic safety" was created in order to bring the functioning of the Polish railways in 2013 closer to English-speaking public. The report is supplemented by the assessment of railway traffic safety. This document is a precise diagnosis reflecting the current condition as well as the perspectives for the development of the railway market in Poland. In particular the report describes the following topics and issues:

- structure and size of passenger and freight transport,
- railway infrastructure market, including the effectiveness indicators, the analysis of access charges and railway infrastructure quality and availability assessment,
- the role of market regulator and the scope of regulatory decisions concerning the access to the railway infrastructure,
- passenger and freight transport, railway infrastructure and competition between transport modes in the European Union,
- railway occurrences in railway traffic, including their tendencies and conditionings,
- analysis of the railway events,
- safety on railway crossings,
- vandalism within the railway network,
- supervision over railway market unit
