

Freight railway market statistics

10.05.2017

Monthly statistics including data for March 2017 have been published.

In March 2017 the weight of transported cargo was at the level of 20.2 m ton and got increased by 14% as well as transport performance and operational performance (by 8.1% and 9.0% respectively) compared to the same period of 2016. The similar weight exceeding 20 m tons was observed last time in March of 2011. Transport performance and operational performance is also at the similar level than in March 2011.

Comparing Q1 2017 to Q1 2016, all three above mentioned parameters were higher not only for the whole period but also for each month separately. The same finding is valid also for the Q1 2017 to Q1 2015 comparison.

In March 2017, the average distance of transport was at the level of 225 km, by 12 km less than in March 2016.
