Rail freight transport results in January 2018

27.03.2018

After a good year 2017, the January 2018 rail freight results are promising.

The weight of transported cargo in January 2018 increased compared to the same period in 2017. Freight trains transported by 22% more of cargo.

20.9 m ton, 4.8 bn tkm and 7 m train-km – these are the results for January 2018 (22%, 29% and 27% increases compared to January 2017 respectively). The growth is due to works on railway infrastructure requiring more rail transport of aggregate and other bulk materials.

The detailed information may be found [here](#).
